US-PAT-NO: 6587837
DOCUMENT-IDENTIFIER: US 6587837 B1

TITLE: Method for delivering electronic content from an online store

DATE-ISSUED: July 1, 2003

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Spagna; Richard	Boca Raton	FL		
Milsted; Kenneth Louis	Boynton Beach	FL		
Lybrand; David P.	Lantana	FL		
Downs; Edgar	Fort Lauderdale	FL		

US-CL-CURRENT: 705/26; 705/50

ABSTRACT:

A method for permitting the electronic delivery of digital content. Metadata is acquired which has been previously associated with content. Promotional metadata is extracted for use with a electronic store. At least one of the metadata is altered to create offer data. And at least one of the metadata is altered to create transaction data. In accordance with another aspect of the invention, a computer readable medium is described to carry out the above method.

TITLE: Multimedia player for an electronic content delivery system

Brief Summary Text (18):
There is a need to overcome the above-mentioned drawbacks and to provide a
multimedia player for an electronic content delivery system. One embodiment of the
present invention provides a method of playing digital content data that has been
compressed and encrypted with a first encrypting key on a system. According to the
method, at least part of the content data is decrypted with a first decrypting key
that corresponds to the first encrypting key. The decrypted content data is
decompressed to produce decompressed content data, and the decompressed content
data is played. In one preferred method, multiple segments of a second decrypting
key that are stored separately on the system are retrieved, and the first
decrypting key is decrypted using the second decrypting key. In such embodiments,
the first decrypting key can be used to decrypt data that has been encrypted with
the first encrypting key, and the second decrypting key can be used to decrypt data
that has been encrypted with the second encrypting key. Further, in various
embodiments, an encrypting key and its corresponding decrypting key can be
symmetric keys (i.e., identical) or a key pair (e.g., a public key and its
corresponding private key).

Detailed Description Text (308):
Either a Key Identifier to indicate the public encryption key that was used to
encrypt the part or an encrypted symmetric key that, when decrypted, is used to
decrypt the encrypted part.

Detailed Description Text (324):
If there are any changes required to be made to the watermarking instructions by
the Clearinghouse(s) 105, then the Clearinghouse(s) 105 decrypts the Symmetric Key
623 and then modifies the watermarking instructions and encrypts them again using a
new Symmetric Key 623. The Symmetric Key 623 is then re-encrypted using the Public
Key 661 of the End-User Device(s) 109. The Clearinghouse(s) 105 also decrypts the
other Symmetric Keys 623 in the SC(s) and encrypts them again with the Public Key
661 of the End-User Device(s) 109. The Clearinghouse(s) 105 builds a License SC(s)
660 that includes the newly encrypted Symmetric Keys 623 and updated watermarking
instructions and sends it to the End-User Device(s) 109 in response to the Order SC
(s) 650. If the processing of the Order SC(s) 650 does not complete successfully,
then the Clearinghouse(s) 105 returns to the End-User Device(s) 109 an HTML page or
equivalent reporting the failure of the authorization process.

Detailed Description Text (336):
Watermarking Instructions--A part that contains the encrypted instructions and
parameters for implementing watermarking in the Content 113. The watermarking
instructions may be modified by the Clearinghouse(s) 105 and returned back to the
End-User Device(s) 109 within the License SC(s) 660. There is a record in the Key
Description part that defines the encryption algorithm that was used to encrypt the
watermarking instructions, the output part name to use when the watermarking
instructions are decrypted, a base64 encoding of the encrypted Symmetric Key 623
bit string that is was used to encrypt the watermarking instructions, the
encryption algorithm that was used to encrypt the Symmetric Key 623, and the

identification of the <u>public key</u> that is required to <u>decrypt</u> the Symmetric <u>Key</u> 623.

<u>Detailed Description Text</u> (379):
The following table shows the parts that are included in the License SC(s) 660 as well as its BOM. As shown in the <u>Key</u> Description part, the Symmetric <u>Keys</u> 623 that are required for <u>decrypting</u> the watermarking instructions, Content 113, and Content 113 metadata have been re<u>-encrypted</u> by the Clearinghouse(s) 105 using the End-User (s)' <u>Public Key</u> 661. When the End-User Device(s) 109 receives the License SC(s) 660 it decrypts the Symmetric Keys 623 and use them to access the encrypted parts from the License SC(s) 660'and the Content SC(s) 630.

<u>Detailed Description Text</u> (483):
One Symmetric Key 623 are used for decrypting the watermarking instructions and the others for decrypting the Content 113 and any encrypted metadata. Since Content 113 can represent a single song or an entire collect of songs on a CD, a different Symmetric Key 623 may be used for each song. The watermarking instructions are included within the Metadata SC(s) 620 portion in the Order SC(s) 650. The Content 113 and encrypted metadata are in the Content SC(s) 630 at a Content Hosting Site (s) 111. The URL and part names of the encrypted Content 113 and metadata parts, within the Content SC(s) 630, are included in the Key Description part of the Metadata SC(s) 620 portion of the Order SC(s) 650. The Clearinghouse(s) 105 uses its private <u>key to decrypt</u> the Symmetric <u>Keys</u> 623 and then <u>encrypts</u> each of them using the <u>Public Key</u> 661 of the End-User Device(s) 109. The Public Key 661 of the End-User Device(s) 109 is retrieved from the Order SC(s) 650. The new encrypted Symmetric Keys 623 are included in the Key Description part of the License SC(s) 660 that the Clearinghouse(s) 105 returns to the End-User Device(s) 109.
